

# WHAT IS A SKYDIO 2+ DRONE?

Powered by artificial intelligence, Skydio's compact autonomous drone provides a way to engage students in practical, immersive learning. Instructors can incorporate footage of panoramic vistas or close-up terrain into online courses.

## WHY USE IT?

You can capture a **new perspective** that was previously inaccessible for cameras on the ground.

The drone can shoot **aerial imagery** of remote locations for data collection and virtual field trips.

With six navigation cameras, the drone allows you to see in every direction for **powerful resolution and clarity**.

## KEEP IN MIND

- The media team needs exact coordinates of your locations for flight plan approval.
- Because we'll need time to obtain approval from FSU police and the FAA to operate the drone, be sure to schedule in advance.
- We need to adhere to FSU and State of Florida drone policies, which may limit our ability to capture certain shots.

### **Our media team provides full-service support for the drone.**

We'll collaborate with you to shoot footage for your course and help with editing. To schedule a time to work with us, please contact D.D. Garbarino, Media Production Manager, at [dgarbarino@fsu.edu](mailto:dgarbarino@fsu.edu) or **850-644-7574** (M-F, 8am-4:30pm). Instructors of distance learning courses will be given priority scheduling.
